第5届 东亚环境市民会议计划案

作为市民如何应多气候变动？

What can citizens do to deal with climate change?

Patrick Schroeder
施龙

What can citizens do to deal with climate change?

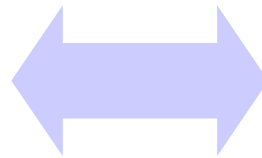

Citizens are consumers!

Unsustainable consumption is one of the main causes for climate change and many other environmental problems.

New technologies can solve many problems, but will not be the silver bullet.

Sustainable consumption is the basis for low carbon lifestyles.

Individual action

Collective action

Individual action: Low-carbon mobility

Less of this

Emissions from transport continue to increase

More of this

Individual action: Low-carbon food choices

Avoid meat and dairy intensive diets

Buy local and seasonal to avoid food miles

Go for organic (if it's not too expensive)

Or...

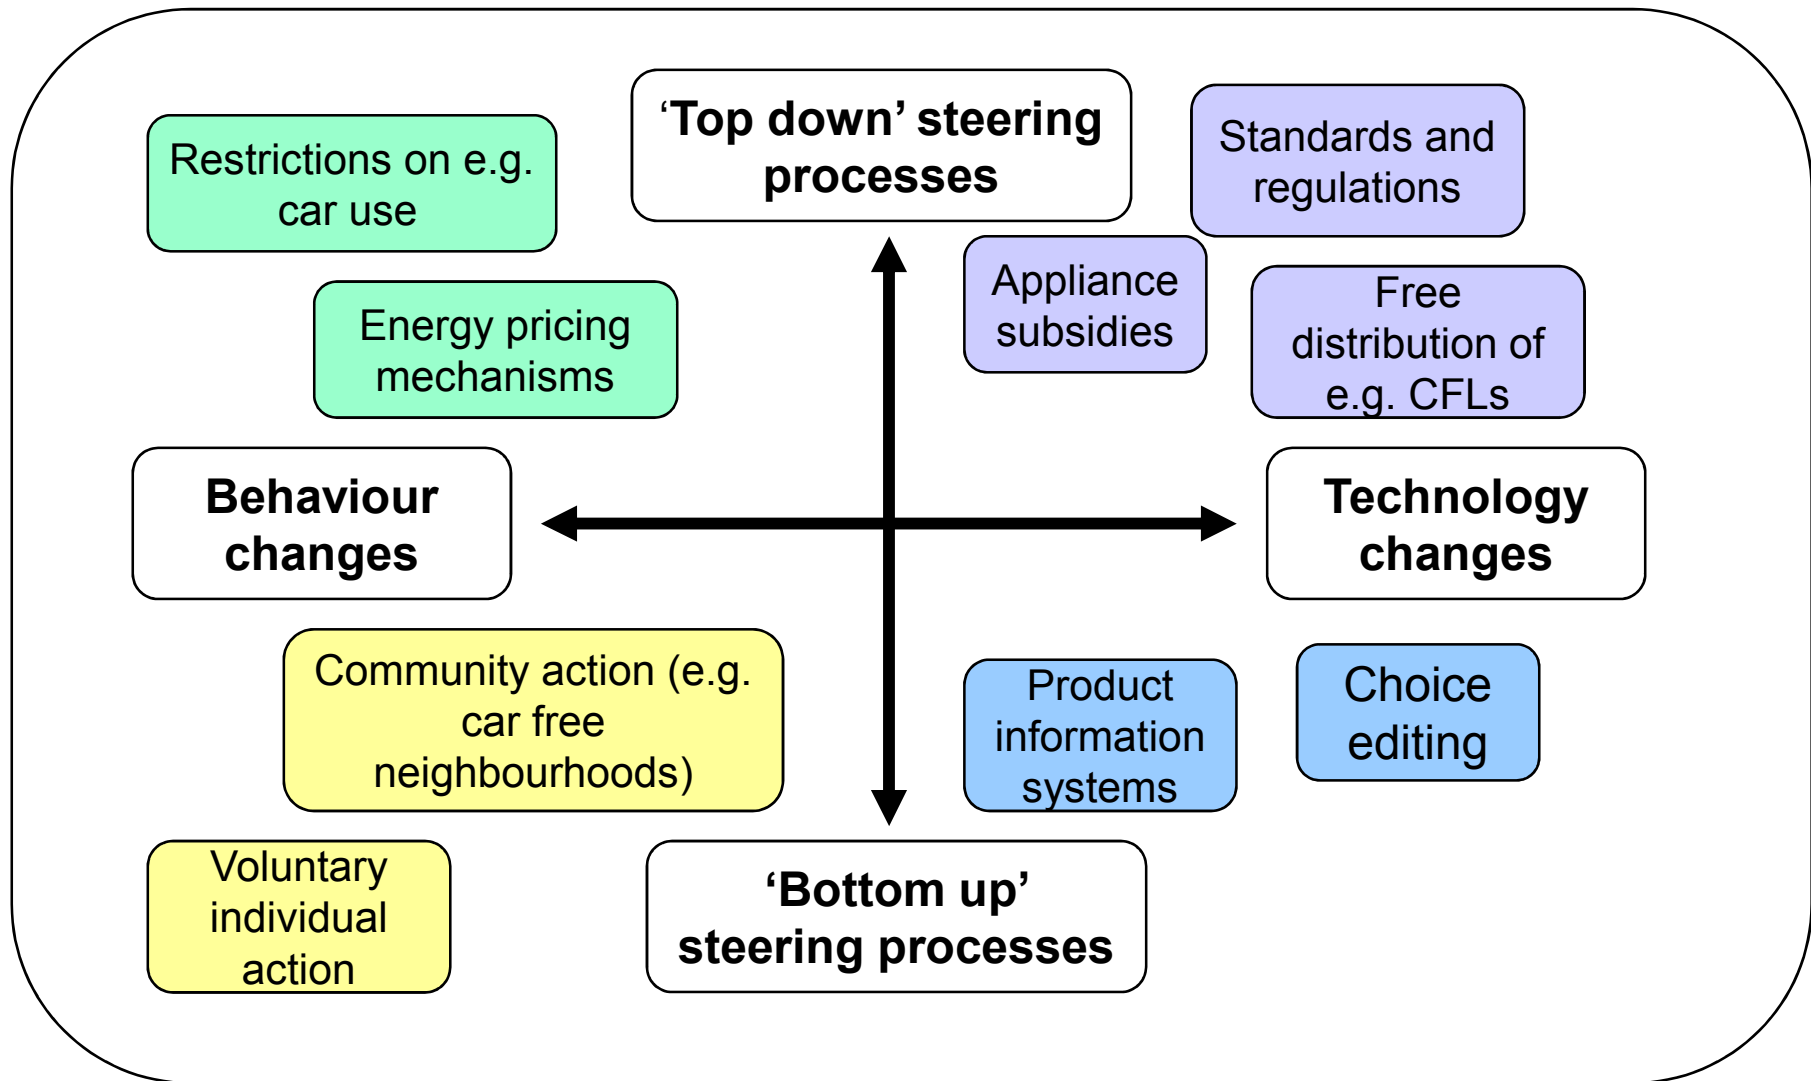

Individual action: Urban food production

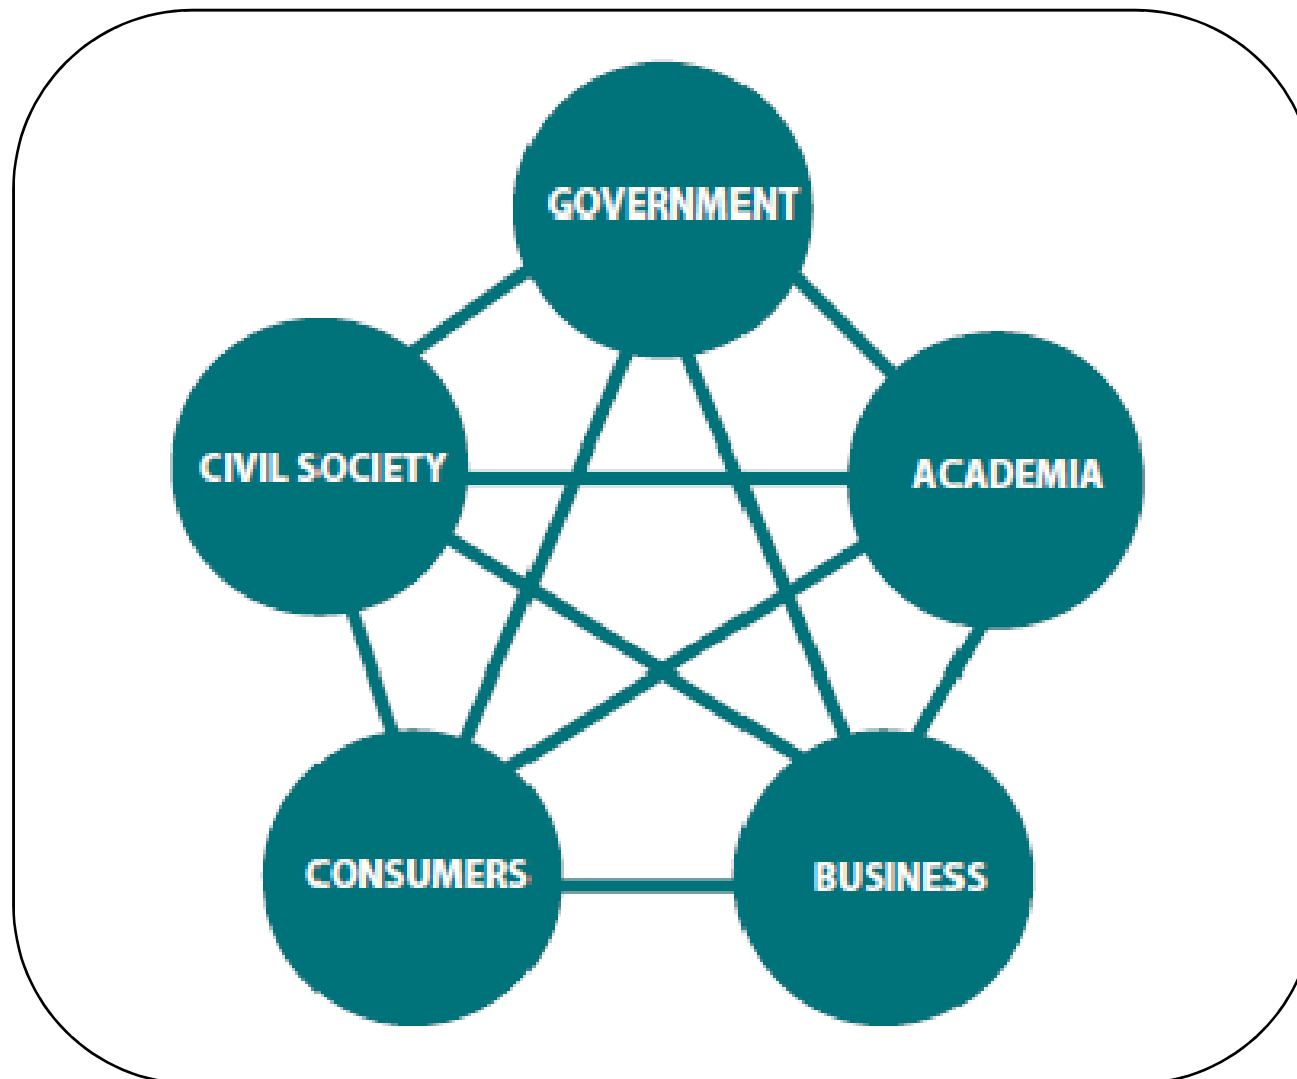

Grow your
own food!

Governance for addressing climate change through changes in technology and behaviour

Collective action: Cooperation partners and dialogue with stakeholders

Collective community action: Linking sustainable mobility & urban food production

Reduction of car numbers frees up space for greening urban areas and for urban food production

Supporting climate change adaptation of the rural poor

Rural poor are the most vulnerable to climate change

Urban citizens can support rural adaptation.
